

Let us jump into a quick demo of Event Sphere

Just for a Second, Pretend that I am a young, slightly ambitious but also slightly shy freshman student attending Calvin University for my first semester ever. Of course, there are events happening but my mind is so capable of holding certain information. Therefore, I downloaded eventsphere...

HOME:

Right away I am on the Home page, with cards about events. I can scroll and see multiple events in which I can join. I can see their respective information details. I can search for events with certain tags (Search events) for things I like and particular things I am looking. I can bookmark them and save them (Save events).

Communities:

There is a community page where I can see various communities. For example, the tech enthusiast community, where me being a freshmen who loves technology would click to find out more about it.

Or if one day I decide to go into cooking, boom! I can check the cooking community and so on.

CREATOR:

Now pretend I am a responsible senior and leader of a student organization who wants to create an event but now that time is limited and that there is no time to waste on silly posters. I would go to the create event (create event)

Girls who code. Ha Dong Park. SB222. 11/17/2024 We will learn about the postman's first idea. Put the tags in and boom fast, efficient and easy.

Or if I am a student who loves sports and has no friends. I could make a less formal event for a pickup game.

Looking to make friends, basketball? Himenga hall. 5v5 brings shoes.

And boom easy. And if we go back to the home page we can edit and delete events too.

You may be asking why use eventsphere if there are things such as instagram where student organizations advertise their events, or posters around campus with long details, or the classic groupme messages.

Well, there are jobs posted everywhere in the media yet everyone uses LinkedIn. Eventsphere is the LinkedIn of events. It gives a more easy and direct way for both event creators and event attendees.

There are more features such as login page but Brian will touch base about that later.
